## Lesson 11: Dilations from Different Centers

## Classwork

## Exploratory Challenge 1

Drawing 2 and Drawing 3 are both scale drawings of Drawing 1.

Drawing 3

a. Determine the scale factor and center for each scale drawing. Take measurements as needed.
b. Is there a way to map Drawing 2 onto Drawing 3 or map Drawing 3 onto Drawing 2?
c. Generalize the parameters of this example and its results.

## Exercise 1

Triangle $A B C$ has been dilated with scale factor $\frac{1}{2}$ from centers $O_{1}$ and $O_{2}$. What can you say about line segments $A_{1} A_{2}$, $B_{1} B_{2}, C_{1} C_{2}$ ?

$$
o_{2}^{\bullet}
$$

## Exploratory Challenge 2

If Drawing 2 is a scale drawing of Drawing 1 with scale factor $r_{1}$, and Drawing 3 is a scale drawing of Drawing 2 with scale factor $r_{2}$, what is the relationship between Drawing 3 and Drawing 1?

a. Determine the scale factor and center for each scale drawing. Take measurements as needed.
b. What is the scale factor going from Drawing 1 to Drawing 3? Take measurements as needed.
c. Compare the centers of dilations of Drawing 1 (to Drawing 2) and of Drawing 2 (to Drawing 3). What do you notice about these centers relative to the center of the composition of dilations $\mathrm{O}_{3}$ ?
d. Generalize the parameters of this example and its results.

## Exercise 2

Triangle $A B C$ has been dilated with scale factor $\frac{2}{3}$ from center $O_{1}$ to get triangle $A^{\prime} B^{\prime} C^{\prime}$, and then triangle $A^{\prime} B^{\prime} C^{\prime}$ is dilated from center $O_{2}$ with scale factor $\frac{1}{2}$ to get triangle $A^{\prime \prime} B^{\prime \prime} C^{\prime \prime}$. Describe the dilation that maps triangle $A B C$ to triangle $A^{\prime \prime} B^{\prime \prime} C^{\prime \prime}$. Find the center and scale factor for that dilation.

## Lesson Summary

In a series of dilations, the scale factor that maps the original figure onto the final image is the product of all the scale factors in the series of dilations.

## Problem Set

1. In Lesson 7, the dilation theorem for line segments said that if two different length line segments in the plane were parallel to each other, then a dilation exists mapping one segment onto the other. Explain why the line segments must be different lengths for a dilation to exist.
2. Regular hexagon $A^{\prime} B^{\prime} C^{\prime} D^{\prime} E^{\prime} F^{\prime}$ is the image of regular hexagon $A B C D E F$ under a dilation from center $O_{1}$, and regular hexagon $A^{\prime \prime} B^{\prime \prime} C^{\prime \prime} D^{\prime \prime} E^{\prime \prime} F^{\prime \prime}$ is the image of regular hexagon $A B C D E F$ under a dilation from center $O_{2}$. Points $A^{\prime}, B^{\prime}, C^{\prime}, D^{\prime}, E^{\prime}$, and $F^{\prime}$ are also the images of points $A^{\prime \prime}, B^{\prime \prime}, C^{\prime \prime}, D^{\prime \prime}, E^{\prime \prime}$, and $F^{\prime \prime}$, respectively, under a translation along vector $\overrightarrow{D^{\prime \prime} D^{\prime}}$. Find a possible regular hexagon $A B C D E F$.

3. A dilation with center $O_{1}$ and scale factor $\frac{1}{2}$ maps figure $F$ to figure $F^{\prime}$. A dilation with center $O_{2}$ and scale factor $\frac{3}{2}$ maps figure $F^{\prime}$ to figure $F^{\prime \prime}$. Draw figures $F^{\prime}$ and $F^{\prime \prime}$, and then find the center $O$ and scale factor $r$ of the dilation that takes $F$ to $F^{\prime \prime}$.

4. If a figure $T$ is dilated from center $O_{1}$ with a scale factor $r_{1}=\frac{3}{4}$ to yield image $T^{\prime}$, and figure $T^{\prime}$ is then dilated from center $O_{2}$ with a scale factor $r_{2}=\frac{4}{3}$ to yield figure $T^{\prime \prime}$. Explain why $T \cong T^{\prime \prime}$.
5. A dilation with center $O_{1}$ and scale factor $\frac{1}{2}$ maps figure $H$ to figure $H^{\prime}$. A dilation with center $O_{2}$ and scale factor 2 maps figure $H^{\prime}$ to figure $H^{\prime \prime}$. Draw figures $H^{\prime}$ and $H^{\prime \prime}$. Find a vector for a translation that maps $H$ to $H^{\prime \prime}$.

$\stackrel{\bullet}{O_{2}}$
6. Figure $W$ is dilated from $O_{1}$ with a scale factor $r_{1}=2$ to yield $W^{\prime}$. Figure $W^{\prime}$ is then dilated from center $O_{2}$ with a scale factor $r_{2}=\frac{1}{4}$ to yield $W^{\prime \prime}$.

$\mathrm{o}_{1}$.

$$
\mathrm{O}_{2}^{\cdot}
$$

a. Construct the composition of dilations of figure $W$ described above.
b. If you were to dilate figure $W^{\prime \prime}$, what scale factor would be required to yield an image that is congruent to figure $W$ ?
c. Locate the center of dilation that maps $W^{\prime \prime}$ to $W$ using the scale factor that you identified in part (b).
7. Figures $F_{1}$ and $F_{2}$ in the diagram below are dilations of $F$ from centers $O_{1}$ and $O_{2}$, respectively.

a. Find $F$.
b. If $F_{1} \cong F_{2}$, what must be true of the scale factors $r_{1}$ and $r_{2}$ of each dilation?
c. If $F_{1} \cong F_{2}$, what must be true of the scale factors $r_{1}$ and $r_{2}$ of each dilation?
8. Use a coordinate plane to complete each part below using $U(2,3), V(6,6)$, and $W(6,-1)$.
a. Dilate $\triangle U V W$ from the origin with a scale factor $r_{1}=2$. List the coordinate of image points $U^{\prime}, V^{\prime}$, and $W^{\prime}$.
b. Dilate $\triangle U V W$ from $(0,6)$ with a scale factor of $r_{2}=\frac{3}{4}$. List the coordinates of image points $U^{\prime \prime}, V^{\prime \prime}$, and $W^{\prime \prime}$.
c. Find the scale factor, $r_{3}$, from $\Delta U^{\prime} V^{\prime} W^{\prime}$ to $\Delta U^{\prime \prime} V^{\prime \prime} W^{\prime \prime}$.
d. Find the coordinates of the center of dilation that maps $\Delta U^{\prime} V^{\prime} W^{\prime}$ to $\Delta U^{\prime \prime} V^{\prime \prime} W^{\prime \prime}$.
