## Lesson 10: Writing and Expanding Multiplication Expressions

## Classwork

## Example 1

Write each expression using the fewest number of symbols and characters. Use math terms to describe the expressions and parts of the expression.
a. $6 \times b$
b. $4 \cdot 3 \cdot h$
c. $2 \times 2 \times 2 \times a \times b$
d. $\quad 5 \times m \times 3 \times p$
e. $\quad 1 \times g \times w$

## Example 2

To expand multiplication expressions we will rewrite the expressions by including the "." back into the expressions.
a. $5 g$
b. $7 a b c$
c. $12 g$
d. $3 h \cdot 8$
e. $7 g \cdot 9 h$

## Example 3

a. Find the product of $4 f \cdot 7 g$.
b. Multiply $3 d e \cdot 9 y z$.
c. Double the product of $6 y$ and $3 b c$.

## Lesson Summary

An Expression in Expanded Form: An expression that is written as sums (and/or differences) of products whose factors are numbers, variables, or variables raised to whole number powers is said to be in expanded form. A single number, variable, or a single product of numbers and/or variables is also considered to be in expanded form.

## Problem Set

1. Rewrite the expression in standard form (use the fewest number of symbols and characters possible).
a. $5 \cdot y$
b. $7 \cdot d \cdot e$
c. $5 \cdot 2 \cdot 2 \cdot y \cdot z$
d. $3 \cdot 3 \cdot 2 \cdot 5 \cdot d$
2. Write the following expressions in expanded form.
a. $3 g$
b. $11 m p$
c. $20 y z$
d. $15 a b c$
3. Find the product.
a. $5 d \cdot 7 g$
b. $12 a b \cdot 3 c d$
