Lesson 1: Wishful Thinking—Does Linearity Hold?

Exit Ticket

1. Xavier says that $(a + b)^2 \neq a^2 + b^2$ but that $(a + b)^3 = a^3 + b^3$. He says that he can prove it by using the values a = 2 and b = -2. Shaundra says that both $(a + b)^2 = a^2 + b^2$ and $(a + b)^3 = a^3 + b^3$ are true and that she can prove it by using the values of a = 7 and b = 0 and also a = 0 and b = 3. Who is correct? Explain.

2. Does f(x) = 3x + 1 display ideal linear properties? Explain.

Wishful Thinking—Does Linearity Hold? 1/5/15

Name

Date _____

Lesson 2: Wishful Thinking—Does Linearity Hold?

Exit Ticket

1. Koshi says that he knows that sin(x + y) = sin(x) + sin(y) because he has plugged in multiple values for x and y and they all work. He has tried $x = 0^{\circ}$ and $y = 0^{\circ}$, but he says that usually works, so he also tried $x = 45^{\circ}$ and $y = 180^{\circ}$, $x = 90^{\circ}$ and $y = 270^{\circ}$, and several others. Is Koshi correct? Explain your answer.

2. Is $f(x) = \sin x$ a linear transformation? Why or why not?

Wishful Thinking—Does Linearity Hold? 1/5/15

Lesson 12: Distance and Complex Numbers

Exit Ticket

- 1. Find the distance between the following points.
 - a. (4, -9) and (1, -5)

b. 4 - 9i and 1 - 5i

c. Explain why they have the same answer numerically in parts (a) and (b), but a different perspective in geometric effect.

2. Given point A = 3 - 2i and point M = -2 + i, if M is the midpoint of A and another point B, find the coordinates of point B.

Name

Date

Lesson 13: Trigonometry and Complex Numbers

Exit Ticket

- 1. State the modulus and argument of each complex number. Explain how you know.
 - a. 4+0*i*

b. -2 + 2i

2. Write each number from Problem 1 in polar form.

3. Explain why $5\left(\cos\left(\frac{\pi}{6}\right) + i\sin\left(\frac{\pi}{6}\right)\right)$ and $\frac{5\sqrt{3}}{2} + \frac{5}{2}i$ represent the same complex number.

Trigonometry Review: Additional Resources

- 1. Evaluate the following.
 - a. sin(30°) b. $\cos\left(\frac{\pi}{3}\right)$
 - d. $\cos\left(\frac{5\pi}{6}\right)$ sin(225°) c.
 - e. $\sin\left(\frac{5\pi}{3}\right)$ cos(330°) f.
- 2. Solve for the acute angle θ , both in radians and degrees, in a right triangle if you are given the opposite side, θ , and adjacent side, A. Round to the nearest thousandth.

a.
$$0 = 3$$
 and $A = 4$
b. $0 = 6$ and $A = 1$
 θ

- c. $0 = 3\sqrt{3}$ and A = 2
- 3. Convert angles in degrees to radians, and convert angles in radians to degrees.
 - 150° a.

 $\frac{3\pi}{4}$ c.

Lesson 17: The Geometric Effect of Multiplying by a Reciprocal

Exit Ticket

Let $z = 1 + \sqrt{3}i$ and $w = \sqrt{3} - i$. Describe each complex number as a transformation of z, and then write the number in rectangular form and identify its modulus and argument.

 $\frac{z}{w}$ 1.

2. $\frac{1}{wz}$

The Geometric Effect of Multiplying by a Reciprocal 1/5/15

Date _____

- 1. Given z = 3 4i and w = -1 + 5i:
 - a. Find the distance between *z* and *w*.

b. Find the midpoint of the segment joining *z* and *w*.

- 2. Let $z_1 = 2 2i$ and $z_2 = (1 i) + \sqrt{3}(1 + i)$.
 - a. What is the modulus and argument of z_1 ?

b. Write z_1 in polar form. Explain why the polar and rectangular forms of a given complex number represent the same number.

Complex Numbers and Transformations 1/5/15

c. Find a complex number w, written in the form w = a + ib, such that $wz_1 = z_2$.

d. What is the modulus and argument of *w*?

e. Write *w* in polar form.

Complex Numbers and Transformations 1/5/15

This work is licensed under a <u>Creative Commons Attribution-NonCommercial-ShareAlike 3.0 Unported License.</u> f. When the points z_1 and z_2 are plotted in the complex plane, explain why the angle between z_1 and z_2 measures arg(w).

g. What type of triangle is formed by the origin and the two points represented by the complex numbers z_1 and z_2 ? Explain how you know.

h. Find the complex number, v, closest to the origin that lies on the line segment connecting z_1 and z_2 . Write v in rectangular form.

- 3. Let z be the complex number 2 + 3i lying in the complex plane.
 - a. What is the conjugate of *z*? Explain how it is related geometrically to *z*.

b. Write down the complex number that is the reflection of *z* across the vertical axis. Explain how you determined your answer.

Let *m* be the line through the origin of slope $\frac{1}{2}$ in the complex plane.

c. Write down a complex number, *w*, of modulus 1 that lies on *m* in the first quadrant in rectangular form.

Complex Numbers and Transformations 1/5/15

d. What is the modulus of *wz*?

e. Explain the relationship between *wz* and *z*. First, use properties of modulus to answer this question, and then give an explanation involving transformations.

f. When asked,

"What is the argument of $\frac{1}{w} z$?" Paul gave the answer: $\arctan\left(\frac{3}{2}\right) - \arctan\left(\frac{1}{2}\right)$, which he then computed to two decimal places.

Provide a geometric explanation that yields Paul's answer.

g. When asked,

"What is the argument of $\frac{1}{w} z$?" Mable did the complex number arithmetic and computed $z \div w$.

She then gave an answer in the form $\arctan\left(\frac{a}{b}\right)$ for some fraction $\frac{a}{b}$. What fraction did Mable find? Up to two decimal places, is Mable's final answer the same as Paul's?

Lesson 30: When Can We Reverse a Transformation?

Exit Ticket

A and B are 2×2 matrices. I is the 2×2 multiplicative identity matrix.

- 1. If AB = A, name the matrix represented by B.
- 2. If A + B = A, name the matrix represented by B.
- 3. If AB = I, name the matrix represented by B.
- 4. Do the matrices have inverses? Justify your answer.
 - a. $\begin{bmatrix} -2 & 6\\ -3 & 9 \end{bmatrix}$ b. $\begin{bmatrix} -2 & 6\\ 3 & 9 \end{bmatrix}$

- 5. Find a value of *a*, such that the given matrix has an inverse.
 - a. $\begin{bmatrix} -4 & 3a \\ 2 & 9 \end{bmatrix}$ b. $\begin{bmatrix} 5 & a \\ -a & 5 \end{bmatrix}$

Lesson 30: Date: When Can We Reverse a Transformation? 1/5/15

Name	Date	

- 1. Consider the transformation on the plane given by the 2 × 2 matrix $\begin{pmatrix} 1 & k \\ 0 & k \end{pmatrix}$ for a fixed positive number k > 1.
 - a. Draw a sketch of the image of the unit square under this transformation (the unit square has vertices (0,0), (1,0), (0,1), (1,1)). Be sure to label all four vertices of the image figure.

The Unit Square

b. What is the area of the image parallelogram?

c. Find the coordinates of a point $\begin{pmatrix} \chi \\ y \end{pmatrix}$ whose image under the transformation is $\begin{pmatrix} 2 \\ 3 \end{pmatrix}$.

Complex Numbers and Transformations 1/5/15

This work is licensed under a <u>Creative Commons Attribution-NonCommercial-ShareAlike 3.0 Unported License.</u> d. The transformation $\begin{pmatrix} 1 & k \\ 0 & k \end{pmatrix}$ is applied once to the point $\begin{pmatrix} 1 \\ 1 \end{pmatrix}$, then once to the image point, then once to the image of the image point, and then once to the image of the image of the image point, and so on. What are the coordinates of a tenfold image of the point $\begin{pmatrix} 1 \\ 1 \end{pmatrix}$, that is, the image of the point after the transformation has been applied 10 times?

2. Consider the transformation given by $\binom{\cos(1) - \sin(1)}{\sin(1) \cos(1)}$.

a. Describe the geometric effect of applying this transformation to a point $\binom{\chi}{\gamma}$ in the plane.

b. Describe the geometric effect of applying this transformation to a point $\begin{pmatrix} x \\ y \end{pmatrix}$ in the plane twice: once to the point and then once to its image.

Complex Numbers and Transformations 1/5/15

c. Use part (b) to prove $\cos(2) = \cos^2(1) - \sin^2(1)$ and $\sin(2) = 2\sin(1)\cos(1)$.

Complex Numbers and Transformations 1/5/15

This work is licensed under a <u>Creative Commons Attribution-NonCommercial-ShareAlike 3.0 Unported License.</u> 3.

a. Explain the geometric representation of multiplying a complex number by 1 + i.

b. Write $(1 + i)^{10}$ as a complex number of the form a + bi for real numbers a and b.

c. Find a complex number a + bi, with a and b positive real numbers, such that $(a + bi)^3 = i$.

d. If z is a complex number, is there sure to exist, for any positive integer n, a complex number w such that $w^n = z$? Explain your answer.

Complex Numbers and Transformations 1/5/15

e. If z is a complex number, is there sure to exist, for any negative integer n, a complex number w such that $w^n = z$? Explain your answer.

4. Let
$$P = \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix}$$
 and $O = \begin{pmatrix} 0 & 0 \\ 0 & 0 \end{pmatrix}$.

a. Give an example of a 2×2 matrix A, not with all entries equal to zero, such that PA = 0.

b. Give an example of a 2×2 matrix *B* with $PB \neq 0$.

c. Give an example of a 2×2 matrix C such that CR = R for all 2×2 matrices R.

Complex Numbers and Transformations 1/5/15

d. If a 2 \times 2 matrix *D* has the property that D + R = R for all 2 \times 2 matrices *R*, must *D* be the zero matrix *O*? Explain.

e. Let $E = \begin{pmatrix} 2 & 4 \\ 3 & 6 \end{pmatrix}$. Is there 2 × 2 matrix F so that $EF = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}$ and $FE = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}$? If so, find one. If not, explain why no such matrix F can exist.

5. In programming a computer video game, Mavis coded the changing location of a space rocket as follows: At a time t seconds between t = 0 seconds and t = 2 seconds, the location $\binom{\chi}{\gamma}$ of the rocket is given by

$$\begin{pmatrix} \cos\left(\frac{\pi}{2}t\right) & -\sin\left(\frac{\pi}{2}t\right) \\ \sin\left(\frac{\pi}{2}t\right) & \cos\left(\frac{\pi}{2}t\right) \end{pmatrix} \begin{pmatrix} -1 \\ -1 \end{pmatrix}.$$

At a time of t seconds between t = 2 seconds and t = 4 seconds, the location of the rocket is given by $\binom{3-t}{3-t}$.

a. What is the location of the rocket at time t = 0? What is its location at time t = 4?

b. Petrich is worried that Mavis may have made a mistake and the location of the rocket is unclear at time t = 2 seconds. Explain why there is no inconsistency in the location of the rocket at this time.

M1

c. What is the area of the region enclosed by the path of the rocket from time t = 0 to time t = 4?

d. Mavis later decided that the moving rocket should be shifted five places farther to the right. How should she adjust her formulations above to accomplish this translation?

Complex Numbers and Transformations 1/5/15
